Ridley College

St. Catherines, Canada

2013 - 2015

### Skills

Fusion360 | Solidworks | Rhino3D

Photoshop | Illustrator | InDesign

Keyshot | Prototyping | 3D Printing

German (Fluent) | English (Fluent)

### Recognitions

ACIDO Rocket Award 2021

ABC Technology Design Award 2020

Browne/Cuisipro Design Award 2019

19<sup>th</sup> Humber Chair Show - First Place

Autodesk Fusion360 Student Expert

### Profile

I am Henry Boy, from Lübeck, Germany and a recent graduate of the Industrial Design program at Humber College in Toronto, Canada. I am a fun and outgoing person who loves to interact with others. I am a systematic thinker and pride myself on finding creative solutions to problems with a focus on function and sustainability.

### Experience

#### Purple Turtle Co.

*Co-Founder | September 2021 - present*

The Purple Turtle Co is a company founded by Jason Baldwin and myself to increase awareness of sustainability issues. We do this through a combination of education, innovation and collaboration. By creating a platform and community, we believe we can help people make informed conscious decisions on living a more sustainable life.

#### Look Again Eyewear

*Eyewear Consultant | May 2019 - September 2021*

During my studies, I worked at Look Again Eyewear to make handmade eyewear. I worked with clients to design and create custom handmade eyewear. I have since worked for them as a consultant working on developing eyewear frames for other eyewear brands.

#### Mero Technologies

*Consulting | July 2020 - December 2020*

Amongst the Covid-19 crisis, a peer and I were tasked to design a retrofit soap tray for sanitizers stations in large buildings to track data. My responsibility was to work with Mero to create an add-on for existing sanitization/soap dispensers using their existing technology. The prototype is currently in testing in the Greater Toronto Area.

#### Humber College

*Workshop Technician | September 2018 - May 2019*

At Humber College, I ran the 3D printing and laser cutting studio and helped students with their projects. Additionally, I was a research assistant to study the impact of 3D printing on medical education equipment.

#### Junge Die Bäckerei

*Internship | March 2018 - May 2018*

Junge Die Bäckerei is a northern german bakery chain, which was curious to research the future of food customization. I was running a project to explore and research possibilities in the field of food mass-customization. I located and converted 3D printers for food production at their facilities.
